

DATALINK
empowering better health

Improve quality performance and outcomes with DataLink
Use actionable data that increases the opportunity for optimal health outcomes.

With our suite of quality solutions, your team is empowered to close gaps in care, prospectively and retrospectively, while engaging more closely with providers to manage quality and contain costs at the point of care.

Here's how we do it.

One platform for data insights
Evoke360 enables payer-provider data insights, improving:

- Quality management:** workflows to identify at point of care, and retro.
- Wellness assessment:** both CMI and plan-specific wellness visit form.
- Utilization management:** and population to target quality performance.
- Provider relationship:** team members and prep improve performance.

Evoke360 SmartVisit

Capture the right data and improve the quality of care
As part of DataLink's Evoke360 platform, SmartVisit streamlines the documentation process for wellness visits by pre-populating key risk, quality, and utilization information. Designed with provider workflows in mind, our payer-agnostic tool enhances provider performance and helps both payers and their providers improve quality at the point of care.

- Meets all CMS requirements with built-in logic to revalidate previously documented HCC codes, and ensure the capture of all chronic conditions.
- Our pre-populated assessment maximizes reimbursement by ensuring all necessary value-based care data elements have been captured during a wellness visit.
- Custom prospective workflows to drive proper diagnosis and documentation of prevalent chronic conditions.
- Optimize data capture and easily import data into any electronic health record to avoid duplication.

Empower Better Outcomes With Data-Driven Insights

Data-driven solutions
Our suite of flexible, data-driven solutions allows stakeholders to focus on their core mission to serve members and patients while improving health outcomes.

EvokeConnect
Experience true data interoperability
EvokeConnect integrates with multiple, disparate clinical data sources to retrieve, aggregate, and share HCC-capturing information. It helps close more gaps in care and ensure accurate risk adjustment while improving health outcomes.

EvokeEHR
Save time and focus more on delivering quality care
EvokeEHR was designed by providers for value-based care with automated workflows to fully measure all diagnosis and procedures. Now you can identify and accurately code for quality measures and risk adjustment at the point of care.
